                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                Ъ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to novel HER-2 (herstatin-2) antagonist CC particularly a polypeptide that binds to the extracellular domain (ECD) CC of HER-2 at a site that is different from the binding site of humanised CC antibody, Herceptin, at an affinity of at least 10°8. The present CC invention is based upon the initial discovery of an alternative HER-2 CC mRNA transcript with 274 bp insert of intron 8. The translation product CC of the alternative transcript is a truncated HER-2 protein designated CC p68HER-2 which lacks the transmembrane and intracellular domains of p185HER-2 but contains ECD I, II of the p185HER-2 and the novel ECDIIIa. CC The ECDIIIA-containing polypeptides bind tightly to, and thus antagonise CC the HER-2 receptor. The peptides, which bind to an HER-2 ECD, and the nucleic acids encoding these are useful to treat, diagnose and identify collid tumours. The present sequence is p88HER-2 ECDIIIa variant CC solid tumours. The present sequence is not shown in the specification but is contained from HER-2 intron 8 encoded ECDIIIa sequence given in figure 8 contained from HER-2 intron 8 encoded ECDIIIa sequence given in figure 8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to novel HER-2 (herstatin-2) antagonist particularly a polypeptide that binds to the extracellular domain (ECD) of HER-2 at a site that is different from the binding site of humanised antibody, Herceptin, at an affinity of at least 10°8. The present invention is based upon the initial discovery of an alternative HER-2 mRNA transcript with 274 bp insert of intron 8. The translation product of the alternative transcript is a truncated HER-2 protein designated p68HER-2 which lacks the transmembrane and intracellular domains of p185HER-2 but contains ECD I, II of the p185HER-2 and the novel ECDIIIa. The ECDIIIA-containing polypeptides bind tightly to, and thus antagonise the HER-2 receptor. The peptides, which bind to an HER-2 ECD, and the nucleic acids encoding these are useful to treat, diagnose and identify solid tumours. The present sequence is human p68HER-2 partial protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           16-FEB-2001; 2001WO-US05327.

                                                                                                                                                                                                                                                                                                                                                                                                                     Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to a method for treating a solid tumour characterised by endothelial growth factor receptor (EGFR) expression. The method involves administering an agent that binds to an extracellular domain (ECD) of EGFR. The invention also relates to a naturally occurring inhibitor of HER-2 receptor tyrosine kinase called herstatin. The coexpression of herstatin with publisher causes a striking reduction in cell growth that corresponds with suppression of p185 autophosphorylation. The method or a pharmaceutical composition is useful for treating a solid tumour (selected from squamous cell carcinoma, lung carcinoma, colon carcinoma and g1lal cell tumour) characterised by EGFR expression. The present sequence is HER2 protein containing extracellular domain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Treating solid tumor characterized by expression of endothelial growth factor receptor, involves administering recombinant herstatin that binds to extracellular domain of the endothelial growth factor receptor

                                                                                                                                                                                                                                                                                                                                                                                                                 Вþ
                                                                                                                                                                                                                                                                                                                                                                                                                                                 δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to novel HER-2 (herstatin-2) antagonist CC particularly a polypeptide that binds to the extracellular domain (ECD) CC of HER-2 at a site that is different from the binding site of humanised CC antibody, Herceptin, at an affinity of at least 10°8. The present CC invention is based upon the initial discovery of an alternative HER-2 CC mRNA transcript with 274 bp insert of intron 8. The translation product CC of the alternative transcript is a truncated HER-2 protein designated CC p68HER-2 which lacks the transmembrane and intracellular domains of CP 1985HER-2 but contains ECD I, II of the p1854ER-2 and the novel ECDIIIa. CC The ECDIIIA-containing polypeptides bind tightly to, and thus antagonise the HER-2 receptor. The peptides, which bind to an HER-2 ECD, and the nucleic acids encoding these are useful to treat, diagnose and identify concleic acids encoding these are useful to treat, diagnose and identify collid tumours. The present sequence is p68HER-2 ECDIIIa variant CC solid tumours. The present sequence is p68HER-2 ECDIIIa variant CC encoded by polymorphic form of human HER-2 intron 8.

CC derived from HER-2 intron 8 encoded ECDIIIa sequence given in figure 8 CC (AARF09164)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Best

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  DЬ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to novel HER-2 (herstatin-2) antagonist comparticularly a polypeptide that binds to the extracellular domain (ECD) of HER-2 at a site that is different from the binding site of humanised antibody, Herceptin, at an affinity of at least 10^8. The present invention is based upon the initial discovery of an alternative HER-2 invention is based upon the initial discovery of an alternative HER-2 compared to the alternative transcript is a truncated HER-2 protein designated possible. The which lacks the transmerrane and intracellular domains of p189HER-2 which lacks the transmerrane and intracellular domains of p189HER-2 which lacks the transmerrane and intracellular domains of p189HER-2 which lacks the transmerrane and intracellular domains of p189HER-2 which lacks the transmerrane and intracellular domains of the p185HER-2 and the novel ECDIIIa.

The ECDIIIA-containing polypeptides bind tightly to, and thus antagonise the ECDIIIA-containing polypeptides bind tightly to, and thus antagonise the HER-2 receptor. The peptides, which bind to an HER-2 ECD, and the collect acids encoding these are useful to treat, diagnose and identify collect acids encoding these are useful to treat, diagnose and identify collect acids encoding these are useful to treat, diagnose and identify collect acids encoded by polymorphic form of human HER-2 intron 8 collect: The present sequence is not shown in the specification but is collected from HER-2 intron 8 encoded ECDIIIa sequence given in figure 8 collected from HER-2 intron 8 encoded ECDIIIa sequence given in figure 8 collected from HER-2 intron 8 encoded ECDIIIa sequence given in figure 8 collected from HER-2 intron 8 encoded ECDIIIa sequence given in figure 8 collected from HER-2 intron 8 encoded ECDIIIa sequence given in figure 8 collected from HER-2 intron 8 encoded ECDIIIa sequence given in figure 8 collected from HER-2 intron 8 encoded ECDIIIa sequence given in figure 8 collected from HER-2 intron 8 encoded ECDIIIa sequence given in figure 8 collected from HE

                                                                                                                                                                                                                                                                                                                                                                                                                                      δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to novel HER-2 (herstatin-2) antagonist CC particularly a polypeptide that binds to the extracellular domain (ECD) CC of HER-2 at a site that is different from the binding site of humanised CC antibody, Herceptin, at an affinity of at least 10~8. The present CC invention is based upon the initial discovery of an alternative HER-2 CC meNAA transcript with 274 bp insert of intron 8. The translation product of the alternative transcript is a truncated HER-2 protein designated CC p6HER-2 which lacks the transmembrane and intracellular domains of CC p185HER-2 which lacks the transmembrane and intracellular domains of CC p185HER-2 which lacks the transmembrane and intracellular domains of CC contains ECD , II of the p185HER-2 and the novel ECDIIIa.

CC The ECDIIIA-containing polypeptides bind tightly to, and thus antagonise CC the HER-2 receptor. The peptides, which bind to an HER-2 ECD, and the cc contains encoding these are useful to tract, diagnose and identify concluded an experience is p6HER-2 ECD. The present sequence is p6HER-2 ECD. The present sequence is not shown in the specification but is contained from HER-2 intron 8 encoded ECDIIIa sequence given in figure 8 contains the present sequence is not shown in the specification but is contained by polymorphic form of human HER-2 intron 8.

                                                                                                                                                                                                                                                                                                                                                                                               δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CC HER-2/neu (erbB-2) oncogene encodes a receptor-like tyrosine kinase. The CC extracellular domain of pl85-HER-2 is proteolytically shed from breast CC carcinoma cells in culture and is found in serum of some cancer patients CC and may be a serum marker of metastatic breast cancer. An alternative CC elementified. The retained intron is in-frame and encodes a 79 amino acid condensitied of the retained intron is in-frame and encodes a 79 amino acid cestension designated ECDIIIa (the present sequence), which is inserted at residue 340 of pl85-HER-2. The alternative mRNA predicts a truncated CC HER-2 protein (approximately 68 kDa) that lacks the transmembrane and contracellular domains (see AAY97240), p68HER-2 specifically binds to CC dimerization of pl85-HER-2. The p68HER-2. It could therefore block CC dimerization of pl85-HER-2. The p68HER-2 polypeptide binds to a site on the ECD of HER-2 that is different from the site of binding for CC derceptin (RTM) (a marketed humanized monoclonal antibody that is used CC for the treatment of cancer and binds to the ECD of HER-2). The methods, CC compositions, polypeptides and antibodies are used to treat solid CC tumours such as breast cancer, small cell lung carcinoma, ovarian cancer (and/or colon cancer, especially where over-expression of HER-2 is
                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches

The present invention is based upon the initial discovery of an alternative HER-2 mRNA transcript with 274 bp insert of intron 8. The translation product of the alternative transcript is a truncated HER-2 protein designated p68HER-2 which lacks the transmembrane and intracellular domains of p185HER-2 but contains ECD I, II of the p185HER-2 and the novel ECDIIIa. The ECDIIIA-containing polypeptides bind tightly to, and thus antagonise the HER-2 receptor. The peptides, which bind to an HER-2 ECD, and the nucleic acids encoding these are useful to treat, diagnose and identify solid tumours. The present sequence is ECDIIIa domain of human p68HER-2 protein encoded by intron 8 of HER-2 gene.
                                                                                                                                                        solid tumour; cancer; polymorphism; cytostatic; gene

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to novel HER-2 (herstatin-2) antagonist particularly a polypeptide that binds to the extracellular domain (ECD) of HER-2 at a site that is different from the binding site of humanised antibody. Herceptin, at an affinity of at least 10°8. The present convention is based upon the initial discovery of an alternative HER-2 invention is based upon the initial discovery of an alternative HER-2 confidence of the alternative transcript is a truncated HER-2 protein designated confidence which lacks the transmembrane and intracellular domains of the plasher-2 but contains ECD I, II of the plasher-2 and the novel ECDIIIa. Confidence of the HER-2 receptor. The peptides, which bind to an HER-2 ECD, and the conclete acids encoding these are useful to treat, diagnose and identify collid tumours. The present sequence is po8HER-2 ECDIIIa variant conclete acids encoding these are useful to treat, diagnose and identify collid tumours. The present sequence is po8HER-2 ECDIIIa variant conclete acids encoding these are useful to treat, diagnose and identify collid tumours. The present sequence is po8HER-2 ECDIIIa variant conclete acids encoded by polymorphic form of human HER-2 intron 8.

CC Note: The present sequence is not shown in the specification but is derived from HER-2 intron 8 encoded ECDIIIa sequence given in figure 8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Matches

The present CC invention is based upon the initial discovery of an alternative HER-2 CC mRNA transcript with 274 bp insert of intron 8. The translation product CC of the alternative transcript is a truncated HER-2 protein designated CC p68HER-2 which lacks the transmembrane and intracellular domains of CC p185HER-2 but containing ECD I, II of the p185HER-2 and the novel ECDIIIa. CT he ECDIIIA-containing polypeptides bind tightly to, and thus antagonise CC the HER-2 receptor. The peptides, which bind to an HER-2 ECD, and the CC nucleic acids encoding these are useful to treat, diagnose and identify CC solid tumours. The present sequence is p68HER-2 ECIIIa variant CC encoded by polymorphic form of human HER-2 intron 8.

CC Note: The present sequence is not shown in the specification but is constructed from HER-2 intron 8 encoded ECDIIIa sequence given in figure 8 of the present sequence is not shown in the specification but is considered in the present sequence is not shown in the specification but is considered the polymorphic form because of the present sequence is not shown in the specification but is considered the present sequence is not shown in the specification but is considered the process of the present sequence is not shown in the specification but is considered the process of the present sequence is not shown in the specification but is considered the process of the present sequence is not shown in the specification but is considered from HER-2 intron 8 encoded ECDIIIa sequence given in figure 8 of the present sequence is not shown in the specific process of the present sequence is not shown in the specific process of the present sequence is not shown in the specific process of the present sequence is not shown in the specific process of the present sequence is not shown in the specific process of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to a method for treating a solid tumour characterised by endothelial growth factor receptor (EGFR) expression. The method involves administering an agent that binds to an extracellular domain (ECD) of EGFR. The invention also relates to a naturally occurring inhibitor of HER-2 receptor tyrosine kinase called herstatin. The coexpression of herstatin with p185HER2 causes a striking reduction in cell growth that corresponds with suppression of p185 autophosphorylation. The method or a pharmaceutical composition is useful for treating a solid tumour (selected from squamous cell carcinoma, lung carcinoma, colon carcinoma and glial cell tumour) characterised by EGFR expression. The present sequence is a protein encoded by human HER2 intron 8.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC particularly a polypeptide that binds to the extracellular domain (ECD) CC of HER-2 at a site that is different from the binding site of humanised CC antibody, Herceptin, at an affinity of at least 10-8. The present CC invention is based upon the initial discovery of an alternative HER-2 (CC mRNA transcript with 274 bp insert of intron 8. The translation product CC of the alternative transcript is a truncated HER-2 protein designated CC p68HER-2 which lacks the transmembrane and intracellular domains of CC molecular contains ECD I. II of the p185HER-2 and the novel ECDIIIa CC The ECDIIIA-containing polypeptides bind tightly to, and thus antagonise CC the HER-2 receptor. The peptides, which bind to an HER-2 ECD, and the CC nucleic acids encoding these are useful to treat, diagnose and identify CC solid tumours. The present sequence is p68HER-2 ECDIII variant CC encoded by polymorphic form of human HER-2 intron 8. CC derived from HER-2 intron 8 encoded ECDIIIa sequence given in figure 8. (AAE00184)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to novel HER-2 (herstatin-2) antagonist particularly a polypeptide that binds to the extracellular domain (ECD) of HER-2 at a site that is different from the binding site of humanised antibody, Herceptin, at an affinity of at least 10°8. The present invention is based upon the initial discovery of an alternative HER-2 mRNA transcript with 274 bp insert of intron 8. The translation product of the alternative transcript is a truncated HER-2 protein designated possessing the strength of the control of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    p185HER-2 but contains ECD I, II of the p185HER-2 and the novel ECDIIIa. The ECDIIIA-containing polypeptides bind tightly to, and thus antagonise the HER-2 receptor. The peptides, which bind to an HER-2 ECD, and the nucleic acids encoding these are useful to treat, diagnose and identify solid tumours. The present sequence is p68HER-2 ECDIIIa variant encoded by polymorphic form of human HER-2 intron 8.

Note: The present sequence is not shown in the specification but is derived from HER-2 intron 8 encoded ECDIIIa sequence given in figure 8

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to novel HER-2 (herstatin-2) antagonist CC particularly a polypeptide that binds to the extracellular domain (ECD) CC of HER-2 at a site that is different from the binding site of humanised CC antibody, Herceptin, at an affinity of at least 10.8. The present CC invention is based upon the initial discovery of an alternative HER-2 CC mRNA transcript with 274 bp insert of intron 8. The translation product CC of the alternative transcript is a truncated HER-2 protein designated CC p68HER-2 which lacks the transmembrane and intracellular domains of CC p185HER-2 but contains ECD I, II of the p185HER-2 and the novel ECDIIIa. CC The ECDIIIA-contains polypeptides bind tightly to, and thus antagonise CC the HER-2 receptor. The peptides, which bind to an HER-2 ECD, and the CC uncleic acids encoding these are useful to treat, diagnose and identify CC solid tumours. The present sequence is p68HER-2 ECDIIIa variant CC encoded by polymorphic form of human HER-2 intron 8.

CC Note: The present sequence is not shown in the specification but is contained.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

                                                                                                                                                                                                                                                                                                                                     The invention relates to novel HER-2 (herstatin-2) antagonist CC particularly a polypeptide that binds to the extracellular domain (ECD) CC of HER-2 at a site that is different from the binding site of humanised CC antibody, Herceptin, at an affinity of at least 10°8. The present CC invention is based upon the initial discovery of an alternative HER-2 CC mRNA transcript with 274 bp insert of intron 8. The translation product CC of the alternative transcript is a truncated HER-2 protein designated CC p68HER-2 which lacks the transmembrane and intracellular domains of CC p185HER-2 but contains ECD I, II of the p185HER-2 and the novel ECDIIIa. CC The ECDIIIA-containing polypeptides bind tightly to, and thus antagonise CC the HER-2 receptor. The peptides, which bind to an HER-2 ECD, and the nucleic acids encoding these are useful to treat, diagnose and identify CC solid tumours. The present sequence is p68HER-2 ECDIIIa variant CC encoded by polymorphic form of human HER-2 intron 8.

CC derived from HER-2 intron 8 encoded ECDIIIa sequence given in figure 8 cannotical for the present sequence is not shown in the specification but is contained.
